

**Intro to Environmental Quality in Buildings
for Realtors and Contractors—**

A free workshop sponsored by New Mexico Department of Health

Locations

Albuquerque **April 6, 2006**

UNM Conference Center, Room D
1634 University Blvd. NE

Las Cruces **May 18, 2006**

NMSU Corbett Center, Otero Room

Farmington **May 23, 2006**

San Juan College, Room 9006

Instructor: Bradley Turk

Bradley Turk is the president of Environmental Building Sciences, Inc. in Santa Fe/Las Vegas, NM. He is a building scientist with over 30 years of experience in indoor air quality and energy management. Since 1989, EBSI has performed investigations in 'problem' buildings, conducted basic research in building air quality and energy efficiency, and developed training materials and programs for governmental, academic, and private clients. Mr. Turk has served as a staff scientist at the UC Lawrence Berkeley National Laboratory where he directed field research on indoor air quality, ventilation, and radon in residences, schools, and commercial buildings. He is an author and reviewer of numerous publications on indoor environmental quality.

Workshop Dates & Locations

Apr. 6, 2006	Albuquerque
May 18, 2006	Las Cruces
May 23, 2006	Farmington

Who Should Attend?

These workshops are tailored for Realtors and construction professionals. Realtors, contractors and homebuilders, code officials, architects, home inspectors, environmental professionals, commercial building owners, managers, and operators, and engineers should plan to attend.

Overview

The environmental quality inside our buildings is a growing concern in the United States, where people spend about 90 percent of their time indoors. The U.S. Environmental Protection Agency identifies poor indoor air quality as one of the top four or five environmental health risks in the United States. Yet many, even those involved professionally with building and housing, are unfamiliar with the important issues of environmental quality in and near our dwellings, work places, and schools.

This series of introductory workshops will establish a broad understanding of indoor environmental quality among individuals and companies involved in the design, construction, inspection, management, operation, and marketing and sales of buildings in New Mexico.

Topics Covered

- Importance of indoor environmental quality: impaired health, costs and reduced productivity, lower comfort
- Health effects: chronic and acute, asthma
- Causes of poor indoor environmental quality: pollutant sources (mold, chemicals, carbon monoxide, particles, radon), insufficient ventilation, maintenance, and operations.
- Control strategies for improving indoor environmental quality: identifying problems, creating indoor environmental quality programs, design and remediation, best practices
- Each workshop will feature presentations and activities, with plenty of time for questions and discussion by the participants.
